Abhinav

+91-8448556649 | abhinavmeena2606@gmail.com | LinkedIn

Technical Skills

Languages & Frameworks: Java, C#, Python, JavaScript, SQL, .NET, Node.js
Databases: Cosmos DB, PostgreSQL, DynamoDB, MongoDB, Redis
Cloud & DevOps: Azure, ARM, Service Fabric, Event Hub, Kafka, Key Vault, Bicep, EV2, Docker, Git, CI/CD
Tools: GitHub, Kusto (KQL), Geneva, Postman, GitHub Copilot, Agentic Coding

Experience

Software Engineer II, Microsoft — Nov 2024 – Present
Azure Resource Notifications (ARN) Platform — *Bangalore, India*

- Owned end-to-end design and delivery of scenario-level throttling and authorization in the ARN Receiver Service – from design doc through production rollout – enabling isolated multi-tenant onboarding under shared publishers; processes **4M+ requests/hour** with mandatory adoption across all new publishers.
- Eliminated a critical Sev-2 compliance gap by implementing direct snapshot publishing from FullSync to ARN, bypassing the 250KB-limited Multiplexer and delivering **5M+ resource notifications/month** across public and national clouds.
- Redesigned ARM endpoint routing for **EU Data Boundary compliance** by building dynamic per-boundary endpoint resolution, achieving 100% boundary-compliant requests and unblocking EUDB adoption for regulated tenants.
- Built end-to-end FullSync infrastructure for **Bleu Cloud (sovereign region)** – Cosmos DB, Storage, Service Fabric – by parameterizing Bicep templates and EV2 pipelines for sovereign cloud variations.

Software Engineer I, Microsoft — May 2022 – Oct 2024
M365 Calendar Platform (Cloud Cache & Calendar Sharing) — *Bangalore, India*

- Shipped the BYGC Teams meeting integration end-to-end – from design doc and external API contract negotiation with Google through worldwide rollout – driving engagement for **260K M365 users**.
- Eliminated exposed secrets by migrating Google Cloud Cache onboarding keys to CredSMART, securing provisioning for **100K new accounts/day.**
- Drove calendar service reliability from **60% to 98%** across 1.3M+ monthly API calls by diagnosing provider integration failures, recurring meeting sync gaps, and a crash bug causing 40K crashes/day.
- Reduced Yahoo calendar sync latency from **30s to 5s** by root-causing transient failures in an untouched CalDAV provider codebase, impacting 19.5M monthly calls.

Backend Developer Intern, Gramoday — May 2021 – Aug 2021
Founding team — *Delhi, India*

- Built 12+ REST APIs powering an agriculture marketplace connecting 500+ farmers to buyers; achieved 90% automated test coverage with Mocha and Chai, reducing regression bugs during weekly releases.
- **Tech:** Node.js, Express, MongoDB, Postman.

Education

Indian Institute of Technology (IIT) Delhi — New Delhi, India
B.Tech in Electrical Engineering — *Aug. 2018 – May 2022*

Projects

Scribble-to-Document | *Honorable Mention – Microsoft Garage Hackathon* — Oct 2023

- Built an AI pipeline that converts meeting discussions and whiteboard images into searchable documents using LLM chains and vector search, enabling semantic Q&A over meeting content.
- **Tech:** LangChain, OpenAI, Instructor Embeddings, FAISS, Streamlit.

WebRTC-Meet | *Node.js, JavaScript, WebRTC, Socket.IO* — Sep 2021

- Built a peer-to-peer video conferencing app with real-time chat, screen sharing, and media recording using WebRTC and Socket.IO as a signaling server.

Extra-Curricular

LeetCode: 1000+ problems solved | *Top 16.5%, 500-day badge*
Winner: Western Group-Dance Competition | *Won among 80+ teams; featured dancer on VDefyn's YouTube (80K+ subs)*
